

## Learning Objectives:

- I can identify different types of precipitation

## Bellringer Review:

- What is the difference between adiabatic and diabatic processes?
- How does air act different if it is unstable vs. stable?
- What must happen for condensation of water to occur in the atmosphere?

## Check for Understanding Questions:

- What determines the type of precipitation that reaches the ground?
- Name four types of precipitation.

# Precipitation

The type of precipitation that reaches Earth's surface depends on the temperature profile in the lowest few kilometers of the atmosphere.

## Check for Understanding Questions:

- What determines the type of precipitation that reaches the ground?
- Name four types of precipitation.

## Learning Objectives: Did you accomplish them?

- I can identify different types of precipitation

## Self-Evaluation

- How well did you understand the material today?  
(1-Lost, 2- understand, 3-can teach it)
- How well did you and your team members participate in class?  
(1-didn't do anything, 2-Bare minimum, 3-fully participated)
